Description

Unlike typical candy concentrate, Alsa's Candy Concentrate contain much higher levels of actual pigment rather than solvent, giving you nearly twice the coverage and a much more even distribution of colour. We have many candy concentrates with which any candy colour can be achieved.

Mixing Ratio

Depending on the desired effect and the number of layers of clear intended to use, you can mix Alsa Candy Concentrate at the following ratio:

1 Quart of (ready to spray) clear coat takes 1 ounce of Candy Concentrate

- 8 ounces of Candy = 240 grams
- 35 drops of Candy = 1 gram
- 1 ounce of Candy = 30 grams

How to Apply Candy Concentrates:

1. Prepare and prime the surface as you would with any normal paint job.
2. Apply your choice of base coat colours or specialty paint (i.e. Killer Chrome; Base Pearls; Stylin Basecoat).
3. Apply 2 - 3 wet coats to ensure uniform coverage.
4. Allow time to dry before applying your final clear or taping off graphics.
5. Topcoat with any of Alsa's recommended clears as you would with any other paint job.
