AC-138	KCAC138	ALSA Clear	Gallon
CB-3012	KCCB3012	Color Blender	Quart
CC Series	KCCC	Candy Concentrate	4 oz / 8 oz

PRODUCT DESCRIPTION

The CRZ Series comes in a multitude of colors including many color shifting versions. The CRZ series is a fast covering artistic mid-coat, that can be styled with a number of different materials. It creates incredible visual depths; from marble looks to snakeskin and even brush stroke patterns. Try going over the first coat with another Crazer colour for an even greater effect. And with an additional option of topcoating with our Candy Concentrates (KCCC, KCKCCC), the colour possibilities are endless.

SOLID CRAZERS

Our new solid Crazer colours are a spectacular addition to an already breath-taking line. These new Crazers give phenomenal coverage and are unique in colour. These colours were designed after the old blowing ball effect where standard base colours were used to achieve a bowling ball or snakeskin effect with solid colours.

MYSTIC CRAZERS

The second new addition to the line of Crazer colours is Mystic Crazers. These Mystic Crazers are an extension of our colour shifting coatings into Crazers. With colour shifting coatings being all the rage, why not be able to have colour shifting Marble patterns with the same ease and great pricing.

APPLICATION

1. Prepare and basecoat your part as you would with any other paint job.
2. Apply 1 medium to wet coat of Crazer to the surface.
3. Immediately use cling wrap or your choice of texturing tool to produce the desired effect. (Apply cling wrap to the entire part then rub the cling wrap down with your hand to insure contact with surface then remove the cling wrap leaving you with a marble like finish.)
4. Let dry (Usually 3 - 5 minutes).
5. Topcoat with polyurethane clear or your choice of topcoats.
