

**MIRRACOLOR  
KCMC**

<b>ALSA CODE</b>	<b>GPI CODE</b>	<b>DESCRIPTION</b>	<b>SIZE</b>
MC Series	KCMC	Mirracolor	Pint

**PRODUCT DESCRIPTION**

MirraColor brings together 2 of our hottest products MirraChrome and Candy Concentrates. The leaders of "Sprayable Chrome" finishes now takes it a step further with Sprayable COLOURED Chrome. Try MirraColor on your next custom project and watch the heads turn.

**APPLICATION**

1. Begin by applying the MirraColor over a black high gloss polished surface.
2. Apply the MirraColor in a light "dust" coat taking care to apply a uniform amount to the entire piece. (For best results, we recommend an Iwata LPH-50 with a 1.0mm Tip. Keep your hand at least 6 inches from the surface and have the material control just "cracked" open. Too much material being applied will result in a duller overall finish).
3. Continue "dusting" the MirraColor for a total of 2 - 3 even passes.
4. If you have excess dust or overspray from the application process you can now wipe it away with the soft flannel polishing cloth (included with all MirraColor kits).

**\*\*NOTE:** The wiping of the MirraColor is OPTIONAL and only required if you experience a heavy accumulation of "dust" on the surface due to the light application.

5. You are now ready to topcoat the MirraColor with Speed Clear (KCSC1230). Begin by applying 1 - 2 even coats to the entire surface.

Allowing 10 - 15 minutes between coats to "Flash".

**\*\*NOTE:** You will notice the colour "Come to Life" as soon as you apply the topcoat. The look of the MirraColor AFTER being topcoated is a "night and day" different when compared to the colour before clear coating.

**\*\*** Allow the topcoated parts to dry for at least 1 hour to touch, and 8 - 12 hours to sand or buff.
